

Automation Engine

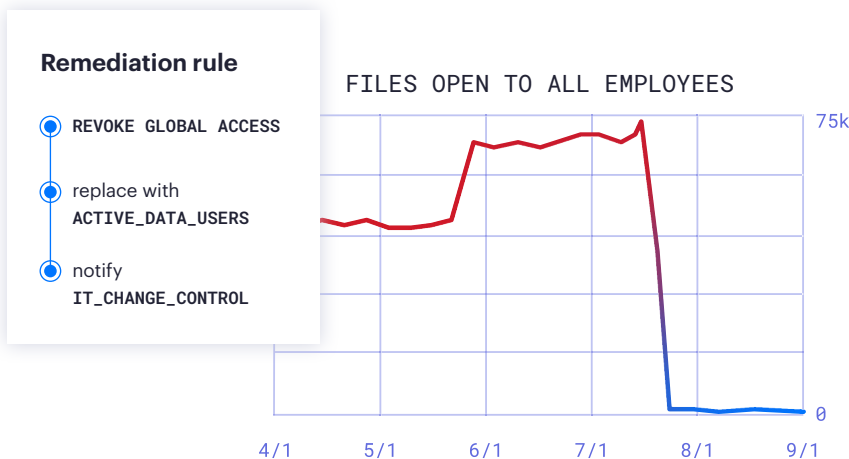

Auto-heal your data exposure.

Challenge

The average employee can access 17 million files on day one. In the event of an attack, that's a massive amount of data that could be compromised. Manually fixing a single misconfigured folder – without breaking anything—can take four to five hours on average, making clean-up projects take years to complete. And with how quickly new data is created and shared, this work is never-ending.

Solution

Automation Engine massively reduces the blast radius by automatically and safely removing open access. Automation Engine removes global access groups and replaces them with single-purpose groups made up of the users who actually use their access. With flexible configuration options, you can fix tactical issues on a folder-by-folder basis, fix inactive datasets, or perform complete enterprise-wide remediation to maintain least-privilege access and reduce risk at scale.

Remediation insights

51% of companies have **over 100,000 folders** open to every employee¹

It takes **4.5 hours** to manually remediate access to a single folder²

Varonis can remediate access to a folder in **seconds**

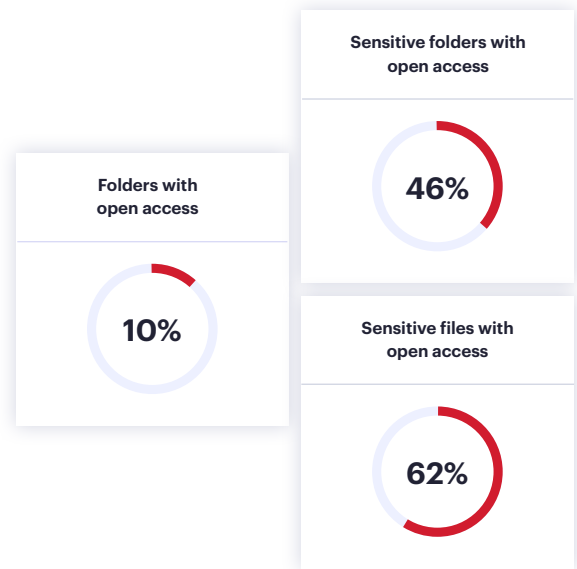

“I don’t think we could have finished fixing permissions without Automation Engine. It would have taken years.”

Security Engineer,
Regional Healthcare System

You can't protect what you can't see.

Get instant visibility into where sensitive data is open to everyone in your organization, leaving it at risk to threats, and automatically revoke access from those that don't need it.

TIME TO REMEDIATE OPEN ACCESS

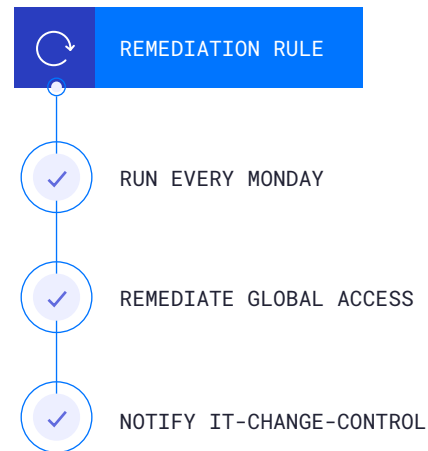

Eradicate open access in a heartbeat.

Automation Engine can safely remediate open access across your corporate file systems in days, not years. It runs silently in the background to enforce Zero Trust as users continue to create and share data.

Auto-heal new exposure.

Set Automation Engine to run on a pre-defined schedule to continuously remediate global access groups and fix inconsistent ACLs as new data is created.

Try Automation Engine for free.

All Varonis products are free to try and come with an engineer-led risk assessment. The easiest way to get started is with a short 1:1 demo and discovery conversation.
